CHEEP budget planner

Budget Planner	Users can plan their spending
Savings Tracker	Users can track their savings
Goals	Users can see what their goals are when those would be achieved under certain circumstances

Budget Planner

Inspiration

- Inspiration was drawn from Commonwealth Bank of Australia's Budget Planner

- However, I wanted more functionality and options. I also wanted to be able to save sessions so I could return to them and see how things were going financially.

Feature

- User enters annual salary

- User enters a category name for expenses for example, Home or Transport

- User enters an expense name for example Rent or Fuel etc

- Process is repeated until all expenses are captured

- A summary of all expenses is displayed against disposable income for the time period the user wished to be shown

3

Savings Tracker

- Users can enter savings amount

- User can edit savings amount

Goals

- Users can enter short term financial goals

- User can see how far from their goals they are based on savings amount

- User can see how long it would take from current savings to goal amount by changing the amount they save each week
